

eBeacon Mobile Application

Entronix eBeacons and Stickers are tiny computers. They have a powerful ARM processor, memory, Bluetooth Smart module, as well as temperature and motion sensors. Powered by a coin battery, they broadcast radio signals through built-in antennas.

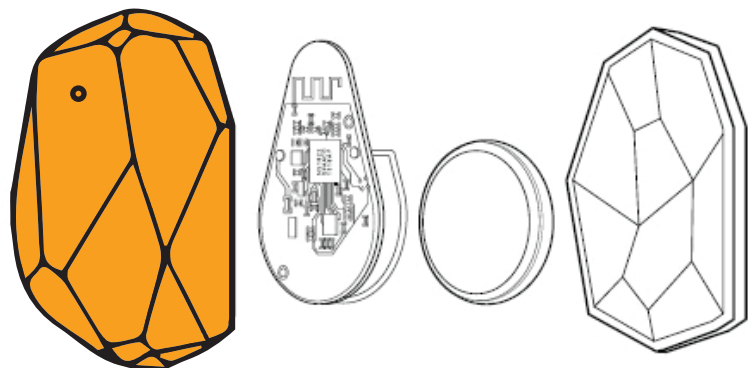

Smart devices in range receive those signals and trigger the eBeacon application to respond. The exact form of that response - whether a notification or another action - is up to you; our platform is fully flexible. Thanks to iBeacon technology, smartphones can now "see" more of the world around them, opening up an endless set of possibilities for richer, more personalized experiences.

The eBeacon application and Cloud tie everything together by granting users full access to responsive dashboards showing real-time analytics of energy consumption, power quality, and productivity comparisons at the enterprise level. They also enable security and other services on top of the beacons.

SPECIFICATIONS

- ▶ Average Battery Life : 3 years
- ▶ Signal Broadcast Rate : 900 milliseconds
- ▶ Maximum Broadcast Range : 45 meters
- ▶ Dimensions : length 2" width 0.5" height 0.5"
