

Mordern Facilities Analytics Platform

ENTRONIX

What service does Entronix provide?

CLOUD BASED SOFTWARE

Entronix is an intelligent facility analytics platform which utilizes cutting edge technologies to make buildings more profitable.

WHAT PROBLEM DOES IT SOLVE?

The platform eases the pain and constant pressure placed on facility management staff to make buildings more efficient and **profitable.**

HOW DOES THIS SOFTWARE INCREASE PROFITS?

The Entronix platform focuses on:

- Real-time fault detection
- Energy management/demand curtailment
- Accurate tenant utility billing
- Sustainability/savings verification reporting
- And more....

HOW IS IT DIFFERENT?

This enterprise level software platform is coded by engineers who are from the facilities industry and it serves the **data driven decision making needs** of universities, stadiums, convention centers, hospitals and class-A high rise buildings through out the US and 9 other countries.

WHY SHOULD YOU CARE?

By utilizing this software, facilities can reduce their cost per Sq.ft. by a minimum of 5% - 10%. Entronix' platform changes what was once considered a **“fixed cost” into a variable cost**, which can then be controlled and reduced.
