

# ENTRONIX AND ENERGY STAR

## WHAT IS ENTRONIX

Entronix is an intelligent facility analytics platform which utilizes cutting edge technologies to make buildings more profitable.

## WHAT IS ENERGY STAR?

Energy Star is a program run by the U.S. EPA and DOE that promotes energy efficiency. Energy Star provides information on the energy consumption of products, devices, and efficiency ratings for buildings.

## PROBLEM?

Managing an Energy Star account is a time consuming and error-prone process. Consumption data for each and every building has to be manually entered into its software.

## ENTRONIX + ENERGY STAR!

Entronix captures building consumption data and automatically pushes it to Energy Star servers every evening. No more manual data entry, or even logging into Energy Star is required.

## WHAT ABOUT ANALYTICS?

All building data currently stored in an Energy Star account can be automatically imported into Entronix. This includes all buildings, and every meter of any type. From there the user can use the dozens of building analytics and reports available in Entronix.

## OVERALL BENEFITS

Automation of Energy Star data entry workflow reduces labor hours and produces meaningful analytics for data driven decision making process.
